50⁺
years

Half a century of experience in parasols and shade systems...

There are some things, that can only be valued in their absence, just like a parasol. No one thinks of a wing to hide under before getting wet in the rain or a shadow to shelter under before being scorched by the sun's heat. At the very beginning of a deep conversation, we forget about the parasol under which we are sitting, we do not even notice that we spend more time in a cool shade, that we enjoy a good meal better. There are some things that add comfort and pleasure to our lives without us even noticing.

In order to offer comfort, we started to cover the rain with the Turkish Parasol Industry (Türk Şemsiye Sanayii) in 1971. After 20 years of experience, we started to protect from the sun with beach parasols in 1990. Following an experience of 20 years, in 1990, we began to protect against sunlight by our beach parasols. As the world was entering the millennium in 2000, we brought a new era to our shades with our Mega umbrellas. In 2020, we started providing professional solutions to the Horeca market by our crank and telescopic products. We have developed Pergo system products for areas where conventional systems are insufficient and illuminated the shades by integrating solar systems. So we brought parasol systems together with technology. We maintain our innovative approach and we are constantly developing and growing.

In this journey, where we follow in the footsteps of our elders who laid the foundations of Tevalli in 1959, we expand our shade even more every year.

We wish you plenty of sunny days to cool off in the shade of Tevalli Parasols.

ATLANTIC
Telescopic System Parasol

ATLANTIC

Atlantic parasol, ensuring maximum protection area on a single pole, has a frame made of hardened aluminum with cast aluminum joints. The moving telescopic system with a steel crankshaft gives a seamless opening and closing experience. It is made of high quality acrylic fabric which is water repellent and resistant to color fading to ensure your comfort under moderate rain. Thanks to the shaders, they offer great protection against UV rays. Through the structure that resists harsh weather conditions and wind, the product offers long-lasting use. While Atlantic Parasol offers shaded area, the frame and fabric colors are specially produced to adapt to the area where it is located, and logo printing work is done on the fabric to reflect the image of your brand or organization. Technology accessories LED lighting, motorized system and heater infrastructure allows for more functional design in the area where it is used.

How To Operate

With the removable handwheel, the mechanism can be moved easily and with little effort. The optional electronic motor provides one-touch move with remote control connection.

Drive System

Thanks to the durable ck-45 steel helical gear structure, the Atlantic series with a Counter-Rotating Telescopic System has a long life span.

OLYMPIC
Telescopic System Parasol

OLYMPIC

Designed to provide wide shading areas with ease, the Olympic model features a reinforced aluminum body supported by galvanized steel lifting arms and an integrated air ventilation tower within the frame structure. Its advanced fabric tension and slide system allow the umbrella to be opened smoothly in a single motion.

The PA6 plastic joint components enhance operational comfort while reinforcing the overall structural strength of the product. Thanks to its fast opening and closing mechanism, the Olympic model saves valuable time in large spaces or multiple installations, offering long-lasting performance with the simplicity and reliability required for intensive commercial use.

Manufactured with high-quality acrylic fabric, the Olympic model is water-repellent to ensure comfort during light rain conditions and resistant to color fading over time. The integrated top canopy provides effective protection against UV rays, while its durable construction ensures long-term resistance to outdoor conditions and wind exposure.

How To Operate

The Olympic model operates efficiently through its advanced slide system. Additionally, the detachable hand crank allows smooth and effortless movement of the mechanism with minimal physical effort, ensuring ease of use in daily operations.

**MANUAL
TELESCOPIC**
Telescopic System Parasol

MANUAL TELESCOPIC

CUSTOM
MADE

The Manual Telescopic umbrella is designed to cover wide areas with its telescopic operating system and practical push-up mechanism, providing effective protection against sun exposure and light rain while enhancing outdoor comfort. The use of ABS plastic joint components maximizes the frame's resistance against sudden wind impacts, ensuring structural stability during daily use.

350x350 cm
400x400 cm

Logo printing can be applied directly onto the fabric, allowing your company or brand identity to be clearly reflected and integrated into the product design.

Depending on operational needs, the Manual Telescopic model can be equipped with a wheeled marble base for mobile use or a ground-fixing system that offers a stable and vibration-free installation. The umbrella is supplied with a standard white frame finish, while custom frame colors are available for orders of 50 units and above.

How To Operate

The integrated spring-loaded telescopic structure operates with a push-up system, enabling smooth and effortless opening and closing for practical and user-friendly operation.

COSMOS
Pergo System Parasol

COSMOS

CUSTOM
MADE

Cosmos Pergo System parasol can shade an area very comfortably and uninterrupted as a result of its horizontal working principle. Thanks to its sliding mechanism, it can be extended and retracted with the rotating handle and the shading height can be adjusted with a 30° range between front and back. It is made of high quality acrylic fabric which is water repellent and resistant to color fading to ensure your comfort under moderate rain. Thanks to the shaders, they offer great protection against UV rays. Through the structure that resists harsh weather conditions and wind, the product offers long-lasting use. With the optional solar package, the umbrella generates its own energy, and with the remote control all lighting functions can be controlled to light up your pleasant moments in the evening. The wooden planter-appearing base brings a warm ambiance to spaces.

ALBATROS
X System Side Mast Parasol

ALBATROS

Inspired by the wide wings of the Albatross bird, the Albatros parasol provides a comfortable shade area up to a maximum of 16 m² uninterrupted with its cantilevered design. It can be switched on and off easily with its System X and suspension support. Thanks to the 360-degree rotating base, you can create shade in different areas without changing the position of the parasol. At the top, the wind swing is minimized with the air release box. It is made of high quality acrylic fabric which is water repellent and resistant to color fading to ensure your comfort under moderate rain. Thanks to the shaders, they offer great protection against UV rays. Through the structure that resists harsh weather conditions and wind, the product offers long-lasting use.

Lift System

It possesses a unilateral X System feature. The hydraulic support helps the slide system move. Following the movement, the system locks the position.

KALINOS
A System Side Mast Parasol

KALINOS

Kalinos ensures maximum shading without sacrificing extra space and adds comfort to your environment thanks to its durable side pole body. The mechanism is supported by suspension for effortless opening. Thanks to its 360° rotatable base and tiltable structure, you can provide shading in different areas without changing the position of the parasol. Crafted from high-quality, water-repellent, and fade-resistant acrylic fabrics, the Kalinos umbrella is built to last. It provides comfort even under moderate rain and offers protection against harmful UV rays with its canopy. Its frame, designed to withstand wind and harsh weather conditions, ensures long-lasting use, giving you peace of mind in your investment.

Lift System

A system, which can take 5 different angles considering the position of the sun, has a structure that can be gathered into the body allowing a smooth using experience.

RODOS

A System Side Mast Parasol

RODOS

Rodos parasol protects an area of 9m² from the sun and potential rain with its cantilever design and compliments your special moments. Our model, which presents the vision of practical and seamless use, can be opened and closed in a very simple way by the turning handle working with the hidden pulley system integrated into it. The exclusive design of this parasol allows you to tilt and rotate it in 360 degrees to block the sun. It is made of high quality Polypropylene fabric that is water repellent and resistant to color fading so that your comfort is not spoiled under light rain. It provides protection from UV rays with its canopy and offers long-lasting use with its structure durable against outdoor weather conditions and wind.

Lift System

You can open and close Rodos using the removable hand crank. When it's fully open, it can be tilted by loosening the locking lever.

Press the pedal located on the marble base to rotate the parasol 360 degrees.

Slide System Parasol

FLAT

CUSTOM
MADE

The FLAT model, representing simplicity in product design, is engineered with a mechanism that allows the umbrella to be opened and closed smoothly in a single motion. Thanks to its reinforced arm structure and high-strength PAA6 plastic gear mechanisms, the FLAT model is designed for long-term, trouble-free use.

A wide range of customization options is available, including acrylic and PP fabric alternatives, custom size production, specially designed valance styles, and logo integration tailored to your business identity. This flexibility enables production that aligns seamlessly with your architectural concept and brand language.

Additionally, the FLAT model can be equipped with an ABS plastic side table integrated into the central pole, making it an ideal solution for poolside and leisure areas.

Drive System

With its slide system, the umbrella can be easily opened and closed in a single motion. Once positioned, all that remains is securing the fastening strap.
